

ERICKSON O. GUHILDE

Baesa, QC | rixon.code@gmail.com

SKILLS

TECHNICAL SKILLS

- **Languages and Frameworks:** JavaScript | Node.js | Express.js | React.js | React Native
- **Databases and Architecture:** MongoDB | RESTful APIs, | Secure Backend Architecture | Database Modeling
- **Tools and Methodologies:** Git, Github, Jira, Gantt Charts, Agile Project Management, AI Development Tools

PROJECTS

Backend Developer & Project Manager

Patient Appointment & Record Management System | MERN Stack, Javascript, TailwindCSS, Lenis

- **Engineered** a MERN backend to digitize manual clinic operations, eliminating bottlenecks and ensuring compliant health record management.
- **Architected** role-based access controls across four user tiers (Patient, Nurse, Medtech, & Doctor), resulting in strict data isolation and secure medical information routing.
- **Directed** a six-member development team utilizing Jira and Gantt charts, resulting in the structured, on-time delivery of client-specified features.

Lead & Fullstack Developer

QCU PORTAL: Library Management System | Javascript, MongoDB, Arcjet, Open Library API

- **Spearheaded** a six-member development team utilizing Jira for agile tracking, resulting in the successful deployment of a fullstack management platform.
- **Architected** the fullstack infrastructure and integrated the Open Library API to build core modules—including automated fines, asset catalogs, and room reservations—resulting in a seamless digital experience managed across a strict four-tier user hierarchy (Student, Faculty, Librarian, Head Librarian).
- **Fortified** application security using JWT, bcrypt hashing, and CORS configuration, resulting in safeguarded user data and comprehensive administrative audit logs.

Fullstack Mobile Developer

ZAPROLL: Registration and Attendance System | React.js Typescript, React Native, Expo, Supabase,

- **Engineered** a mobile registration and attendance application using React Native, Expo, and Supabase, resulting in streamlined event management for an annual university research colloquium.
- **Developed** a built-in custom feedback form builder and pre-registration workflow, resulting in the elimination of third-party tools and centralized student data collection.
- **Implemented** data analytics and attendance export functionalities, resulting in smoother event-day operations and highly accessible post-event reporting.

UI/UX Designer & Frontend Developer

PIJIN | React Native, Typescript, DrizzleORM, SQLite, RxJs, NeonDB, Rust, Soroban Smart Contract

- **Designed** minimalist, structured mobile interfaces in Figma to streamline application workflows and enhance user experience.
- **Developed** a highly responsive, cross-platform frontend architecture utilizing React Native and Expo.
- **Optimized** offline capabilities and local state management with RxJS, Drizzle ORM, and SQLite to ensure seamless zero-connectivity performance.

ACHIEVEMENTS

CHAMPION | Stellar Philippines Hackathon 2026 | Rise In

May 2026

- **Engineered** *AbotPera*, an offline-capable payment application built on the Stellar Blockchain to resolve local financial inclusion barriers, successfully securing 1st place overall.

3RD PLACE (Local Finance & Real World Access) | APAC Stellar Hackathon (Rise In) | 2026

July 2026

- **Architected** *Pijin*, a peer-to-peer e-wallet featuring an offline-first architecture that enables secure, zero-connectivity money transfers, successfully scaling a previous blockchain prototype for regional competition.

EDUCATION

QUEZON CITY UNIVERSITY

Bachelor of Science in Information Technology

Novaliches, QC

Aug 2023 - Present
